Supplementary Table 1 Characteristics of the paediatric study population^a

Characteristic	Category	Primary school children (n=48)	High school children (n=43)	Total N=91
Median age in years (IQR)		9 (8-10)	14 (13-15)	12 (9-14)
Sex				
	Female	23 (48)	28 (65)	51 (56)
	Male	25 (52)	15 (35)	40 (44)
Outpatient or inpatient				
	Outpatient	43 (90)	41 (95)	84 (92)
	Inpatient	5 (10)	2 (2)	7 (8)
Smoking status				
	Never smoked	48 (100)	41 (95)	82 (90)
	Tried once	0 (0)	5 (12)	5 (6)
	More than once	0 (0)	1 (2)	1 (1)
Places exposed to SHS^b				
	Own home	6 (13)	5 (12)	11 (12)
	Other people's home	13 (27)	6 (14)	19 (21)
	Car	4 (8)	2 (5)	6 (7)
	Street	27 (56)	26 (61)	53 (58)
	Restaurant	18 (38)	19 (44)	37 (41)
	Park/playground	18 (38)	6 (14)	24 (26)
	School	4 (8)	22 (51)	26 (29)
	Public places	8 (17)	18 (42)	26 (29)
	Never	7 (15)	1 (2)	8 (9)
Median age parent in years^c (IQR)		39 (36-43)	44 (41-47)	42 (38-46)
Role of parent^c				
	Mother	34 (71)	31 (72)	65 (71)
	Father	13 (27)	10 (23)	23 (25)
	Other	1 (2)	2 (5)	3 (3)
Smoking status parent^c				
	Current smoker	10 (21)	4 (9)	14 (15)
	Former smoker	12 (25)	10 (23)	22 (24)

Never smoker	26 (54)	29 (67)	55 (60)
--------------	---------	---------	---------

^a Data presented as n(%) unless stated otherwise

^b Second-hand smoke

^c Parent filling out the questionnaire
